

"Call of Odin's Chosen" KOL Promotion Plan

1. The Core Edge: A New Era of GameFi on TON

Welcome, Jarls. We are launching "Call of Odin's Chosen" on TON—a **new, verifiable on-chain economy**. This is a P2E 3.0 model built on two pillars: **The Month 1 Advantage** and **A Verifiable, Long-Term Model**.

Pillar 1: The FOMO Engine (Acquisition)

The mining output, drawn from a **fixed total supply of 210 billion \$COC**, follows a **monthly halving model** inspired by Bitcoin. **This means Month 1 offers the absolute maximum yield**. This isn't just an advantage—it's **the primary acquisition window** for any community.

Pillar 2: The Long-Term Narrative (Sustainability)

This model is backed by a verifiable deflationary engine. **40% of all in-game \$COC consumption is permanently burned**, while **84% of the total supply** is allocated directly to players. Every key economic event—from mining to burns—is verifiable on-chain via the VWA (Verifiable World Asset) mechanism.

We provide you with both narratives: the unmissable FOMO of the Month 1 halving, and the long-term, on-chain proof of a deflationary, player-owned economy. We invite you to be a **core partner** in capturing both.

2. Partnership Mission: Content & Community

Onboarding

This partnership is centered on **creating high-signal content** and **focused community acquisition**. While broad reach is valuable, the primary goal is to **build a core community of dedicated players ready to scale** with the \$COC economy long-term. The program seeks **partners for the long haul**: Web3-native creators who can **activate this community** and are committed to **building a provably player-owned economy**.

Content Amplification Platforms:

- **X (Twitter): Spark viral engagement** and **own the narrative** through high-impact threads, high-signal memes, and short-form video.
- **YouTube/TikTok: Produce high-conversion**, in-depth game reviews, strategic breakdowns, and gameplay guides to convert viewers into **provably genuine users**.
- **Telegram/Discord: Prepare for the Day 1 activation.** Arm them with exclusive intel and mobilize your followers.

3. The KOL's \$COC Commission Engine

***Note:** This \$COC Revenue Share Program is an **exclusive KOL-only overlay**. It **stacks on top of** the standard in-game Diamond commission . KOLs who refer users are eligible for **both** the \$COC commission and the Diamond commission (from Tier 4).*

This engine provides direct, real-yield incentives by linking KOL rewards to the ecosystem's core revenue.

The KOL's Revenue Engine

KOLs receive a **10% rev-share** on the total **USD-denominated deposits** from their referred user base. This is a pure \$COC token commission, calculated against the **previous week's average price** to protect against volatility. Payouts are settled **weekly (T+2)** directly to the KOL's whitelisted wallet.

(Example: 1,000 USDT in referred deposits in Week 1 generates 100 USDT in commission. This 100 USDT is then paid out in Week 2 as \$COC tokens, with the token amount calculated using the \$COC price at the time of settlement.)

The KOL's Advantage

- **True Real Yield, No Lockups:** This is immediate, uncapped revenue in **\$COC**. There are no vesting schedules, cliffs, or lockups.
- **Zero Onboarding Cost:** KOLs are not required to purchase assets or meet quotas. The focus is 100% on conversion.
- **Radical Transparency:** All referral data is tracked on a **live KOL dashboard**. All payouts are verifiable on-chain.

KOL's Mission: Deploy & Convert

The mission is straightforward: **Deploy official \$COC referral links** across all channels (X,

YouTube, TG). **Drive high-value conversion** with consistent content (e.g., ~2x pieces/week). **Monitor the live dashboard** to optimize traffic and scale your earnings.

Revenue Share Exclusion: 'Star' Deposits

'Star'-designated deposits are non-commissionable and are excluded from the 10% \$COC Revenue Share calculation.

4. The Spoils of Conquest: Multi-Tiered Reward Engine (Diamond Rewards)

This section covers the **additional** rewards paid in **Diamond** (the in-game utility asset) for content creation and initial community building. All Diamond-based rewards in this program are pegged to a stable value of **100 Diamond = 1 USDT**.

What is Diamond?

Diamond is the key to the game's mining mechanics, which mirror the Bitcoin model.

- **Ships = Mining Rigs** : Diamond is used to acquire **Ships**. These are the core **mining rigs** deployed to mine **\$COC** via a 10-minute reward lottery. More Ships = higher **hash rate** (mining weight).
- **Sailing Fees = Electricity Fees** : Diamond is also consumed to cover **Sailing Fees**—the operational "**electricity cost**" required to keep the rigs mining. **Furthermore, this system is automated; as long as sufficient Diamond is held for these fees, ships are automatically deployed** for continuous mining without requiring manual clicks.

Tier 1: Content Creation Rewards

Create high-quality content and receive immediate, tangible value in Diamond.

Content Type	Reward (in Diamond)	Key Requirements
--------------	---------------------	------------------

X /TG channel Post	2,000 Diamond	"Requires official hashtags, project links & clear CTA. Visuals (memes, infographics) strongly preferred."
Short-Form Video (< 1 min)	5,000 Diamond	High-impact short-form (Shorts/TikTok/X). Must distill one key feature or the core game loop.
Long-Form Video (> 1 min)	15,000 Diamond	"High-conversion ""standard"" or ""deep-dive"" video (YouTube/TikTok). Requires high-production value & clear strategic insights."

Tier 2: Community Growth Engine

A leader's value is measured by the strength of their community. This tier rewards the onboarding of real, active players into the Viking world. Achieving invitation milestones unlocks significant Diamond bonuses.

Invitation Milestone (Verified Referred Players)	Cumulative Reward (in Diamond)
100 Invited Users	2,000 Diamond
200 Invited Users	4,200 Diamond
500 Invited Users	11,400 Diamond
1,000 Invited Users	24,400 Diamond

3,000 Invited Users	80,400 Diamond
5,000 Invited Users	150,000 Diamond

A Note on Verification (Applies to Tier 1 & 2): To ensure **rewards are verifiably earned** and protect the ecosystem's value, all rewards are tied directly to **verifiable on-chain metrics** via the VWA mechanism. This serves as the **definitive on-chain record**, confirming **genuine users (sybil-resistant)** and ensuring rewards are based on **provable community growth**.

Tier 3: Ecosystem KOL Program

Partners can expand the council of KOLs. Introducing high-value leaders to the ecosystem qualifies them for a performance-based bounty.

- **Performance-Gated Bounty:** This is a **quality-first** incentive. The bounty is **performance-gated**; payment is contingent on the referred partner's verified results.
- **Bounty Activation:** A **10,000 Diamond** (100 USDT) bounty unlocks *only when* the referred and approved KOL achieves **one** of the following milestones:
 - **(A) Content Proof:** Publishes one deep-dive video (Tier 1, 15,000 Diamond value).
 - **OR (B) Community Proof:** Reaches 500 verified players (Tier 2, 11,400 Diamond value).

Tier 4: Community Referral Engine (Standard In-Game Program)

This is the in-game referral engine, open to all players, and separate from the KOL-specific tiers (1-3).

A) Lifetime Commission

- A **10% commission** from all Diamond purchases is routed to the original inviter. Payouts are in Diamond.

B) Immediate Onboarding Bounties

- **Standard Referral:** A one-time Diamond reward is issued for each new non-Telegram Premium player referral.

- **Premium Referral:** A one-time Diamond reward awarded if the invited player is verified as a **Telegram Premium** user. This bounty is **far more** than the standard referral reward.

C) Invitee Player Progression Rewards

- This rewards long-term mentorship and sustained engagement. Inviters earn cumulative Diamond bonuses as their referred players progress deeper into the game.
